

2017 Project Cost Square Foot Data

Back by popular demand for 2017 are the highly used and vitally important Project Costs – costs per square foot for completed construction projects. Customers of RSMeans data who relied upon project costs missed them in the 2016 publications. After receiving customer feedback, a research effort was undertaken with the goal of reinstating this important set of information.

These new project costs are broken down into 28 categories or building types for ease of use. Included within each category are architectural, mechanical, electrical, plumbing and total costs statistically organized by dollar value and by percentage of total.

Conceptual or Square Foot estimates can be prepared by using the information in the categories and by using the Square Foot Project Size Modifier information included with the costs.

For ease of use, please find all available for [download as PDF online](#).

Submit Your Project Costs

Gordian's RSMeans data engineers would greatly appreciate receiving cost figures on one or more of your recent projects, which would then be included in the average for next year. All cost figures will be kept confidential, except that they will be averaged with other similar projects to arrive at square foot cost figures for next year's book.

To submit your project costs, [please complete and return this form](#).
